

PLASMA™
UV-Curable inks

PLASMA™ UV-Curable inks

Inks That Expand Your Horizons

Bordeaux's PLASMA ink is a proprietary ink for UV-based printers. Bordeaux's UV-Curable PLASMA ink offers fast curing and long-term outdoor durability.

The PLASMA ink is fast curing, only requiring small exposure dose to UV light, and generating high resolution in fast mode printing. The color gamut supports the Eurostandard / SWOP color management systems.

The PLASMA ink does not require priming and complies with the versatility of the associated UV printing media, whether flexible or rigid. The ink is crease-resistant on flexible material and highly adhesive on rigid materials.

Its enhanced adhesion to a wide range of media, including corona treated plastic sheets (e.g. Coroplast™) manifest a great advantage of Bordeaux PLASMA inks.

Bordeaux's VOC free PLASMA inks are available in 9 colors including white ink. The white ink is characterized by high opacity for use on dark & transparent background for extended application range.

Color And Outdoor Durability

The highest quality pigments have been chosen for their wide color gamut maximizing the range of colors available for wide gamut, high durability prints and abrasion resistance for outdoor signage, fleet graphics and billboards.

The accelerated weathering tests performed on the PLASMA series show a durability of approximately 24 months in outdoor conditions in zone 1.

Unique Benefits

- Instant curing properties for high productivity modes
- Excellent adhesion on Coroplast™ plastic sheets
- Non irritant
- Not regulated for transport - non hazardous
- 4 light colors and white available
- Compatible with all types of substrates and UV applications
