PRIME-ECO™ Eco-Solvent inks

Immaculate Quality - Environmental Advantage

The demand for alternative ecologically friendly products has greatly increased due to the stronger awareness to environmental issues and introduction of high productivity Eco-Solvent printers to the market. Bordeaux has answered the market needs by developing a rather unique new ecologically friendly ink.

In early 2006, Bordeaux introduced the second generation of Eco-Solvent ink in Europe, Middle East and Africa. In early 2007, Bordeaux started promoting this new ink in North America, and demonstrated it at the ISA show in Las Vegas and at the FESPA show in Berlin. Bordeaux Eco-Solvent ink has met customer applause for its performance, reliability and ease of use.

Compatibility

Bordeaux's Prime-Eco is fully compatible with Roland's ECO-SOL MAX™ ink and with Mutoh's Eco Ultra™ ink. Just "plug and play" and you're ready to go! There is no need to flush or spending costly time creating new profiles. You can use your OEM ink to the end while replacing only empty channels: the Mix & Match concept increases your productivity level! Our inks produce: High print density

- Extremely wide color gamut
- Quick drying with excellent substrate adhesion
- Superior scratch resistance
- Long life prints that can be laminated for extended use
- High quality prints using a wide

selection of uncoated banner, mesh, vinyl, self adhesive vinyl and paper.

Bordeaux has also designed the Eco-Solvent Inks to interact seamlessly with the Printer: 100%-compatibility with original printer components • Promote printhead life • Will not cause clogging and misfiring • No Need to use mechanical ventilation directly over the Printer

General Information

Eco-Solvent ink, as the name states, is the most environmentally friendly of the inks using solvent carrier systems.

A major benefit of Bordeaux's Eco-Solvent ink is the extended printhead life and limited need to regulate the surrounding airflow. HAZMAT shipping is also avoided. Eco-Solvent inks can be used for everything from high-resolution indoor signs to outdoor durable billboards, using high printing speeds and have the ability to adhere to coated and uncoated substrates.

Green Facts

- Practically Odorless
- Wide Color Gamut and high Optical Density
- Outdoor Durability guaranteed for up to 2 years
- Optimized Adhesion and Scratch Resistance with both coated and uncoated substrates
